EXPERIENCE

Google **New York, NY**

Software Engineer *Oct 2025 – June 2026*

- Partnered directly with research teams to scope evaluation requirements and translate them into deployed tooling, owning solutions from ambiguous problem statements through production workflows.
- Architected an agentic evaluation pipeline in Python on the Gemini API, automating per-cycle scoring of roughly 1,000 image outputs with human verification checkpoints, replacing a fully manual annotation workflow.
- Designed and deployed an automated delivery tracking system spanning three concurrent projects, replacing a manual process that previously took 2 to 3 hours per cycle.
- Consolidated inputs from 5 vendor sources into a centralized reporting pipeline and single dashboard, eliminating manual review across 10+ tracking surfaces and reducing reporting time by 70%.
- Built dashboards in PLX using SQL for 20+ stakeholders to surface KPIs, progress, and quality metrics, iterating rapidly on requirements gathered directly from end users.

Meta **New York, NY**

Data Solutions Lead *Sep 2024 – Sep 2025*

- Shipped React tooling that parsed and formatted vendor JSON data, enabling structured QA analysis across 10,000+ data points and directly improving analyst review speed.
- Integrated external vendor APIs into an internal UI generation project to pull and visualize model outputs for evaluation, connecting outside systems with internal review workflows.
- Developed Python analyses of model failure trajectories across datasets, establishing concrete failure modes and running model comparisons that directly informed Llama training improvements.
- Defined evaluation rubrics alongside researchers for assessing model response quality, standardizing criteria adopted across annotation teams and vendors.
- Built a data comparison workflow in Python spanning three vendor datasets, generating charts and visualizations that translated raw quality data into actionable insights for nontechnical stakeholders.
- Led 30+ analysts across two teams validating training data for Llama's coding and agentic capabilities, serving as the technical bridge between engineering, research, and vendor teams.

NYC Mayor's Office, Information Technology Division **New York, NY**

Software Engineer *Jan 2024 – Jul 2024*

- Embedded with internal government teams as the technical point of contact, scoping requirements, translating operational needs into specifications, and delivering working software against them.
- Delivered an organization chart application using C#, ASP.NET, and Java across Windows and Android platforms.
- Migrated and validated legacy organizational data into the new system with zero data loss across thousands of employee records.
- Optimized database performance and data integrity by building and maintaining stored procedures in SQL.

EDUCATION

New York City College of Technology **New York, NY**

Bachelor's Degree in Computer Information Systems *May 2024*

SKILLS

AI/ML: LLM API Integration, Agentic Workflows, Model Evaluation, Prompt Engineering, RLHF, Data Annotation Pipelines
Languages/Technologies: Python, SQL, JavaScript, React, Go, C#, Java, ASP.NET, HTML/CSS, Git, Docker, PostgreSQL, MongoDB, Jira
